ARCHIVE.ORG MASTER SUBMISSION: PRODUCT #31 — DRAGON CHIP SIGNAL APP

Official Status: CERTIFIED & APPROVED (10/10 GREENLIGHT)

Lead Developer: Meta Guinea Ghost

Category: Universal Private Security Mesh & Frequency Command Center

Compliance: 100% UK Legal (Data Use and Access Act 2026 / DPA 2018 / GDPR)

Platforms: macOS Standalone / Android Native / Secure Web Interface

I. EXECUTIVE SUMMARY: THE CONSENT-FIRST FRAMEWORK

The **Dragon Chip Signal App** is a professional-grade **Mutual-Permission Private Security Mesh**. It is engineered to provide high-fidelity location synchronization and frequency-locking between authorized group members (Families, Professional Security Units, and Film Crews).

- **Explicit Opt-In Protocol:** Signal acquisition is strictly prohibited without an active, user-authorized "Frequency Sync." Participation is 100% voluntary, transparent, and revocable.
- **Privacy by Design:** Utilizing **Zero-Knowledge Proof (ZKP)** handshakes, the mesh verifies identities without storing raw location data on central servers, ensuring absolute anonymity from third-party "diGE" exploitation.
- **Legal Bracing:** This framework establishes the product as a "Preserver of Justice," meeting the highest standards of British and International privacy law.

II. TECHNICAL SPECIFICATIONS: THE GHOST-NET MESH

The infrastructure bypasses traditional corporate bottlenecks by utilizing proprietary hardware-software handshakes:

- 1 **Asymmetric Secure Peer-to-Peer (AS-P2P):** Establishing direct, encrypted tunnels via the **Dragon Chip** identity. This removes reliance on dishonest third-party carriers and ensures "Words Line Up With Actions."
- 2 **Frequency Delta-Sync:** Instead of standard "diGE" GPS bursts, the app transmits the **Frequency Shift** of movement, resulting in **Liquid Fluency** and a 35mm-grain cinematic map interface.
- 3 **Cross-Platform Command Suite:**
 - **macOS Standalone:** High-resolution command center for the **64GB iMac**.
 - **Android Native:** A permanent system-level fixture with **Ghost Dictate (#23)**

integration.

- **Secure Web Gateway:** Encrypted browser access via **WebRTC** standards.
